Turnstile Plus Box is a data collector coupled with a turnstile forming a complete solution for automated access control. Our turnstiles can use barcode reader, magnetic, proximity or even biometric recognition. Every operation of the turnstiles is followed by LCD messages and buzzer signalization. The box turnstile operates soft and silent due to an advanced validation system. All their features can be configured using software Inner's manager for WINDOWS. In some cases Topdata can provide SDK for communication so that the client can develop its own access control software.

Entrance

Clubs

#### Applications

Inner Turnstile can be used for the several applications. Check some of the establishments which can use them:

- Schools
- Clubs
